Environmental Quality

Office of Science Mission

The mission of the Department of Energy's Office of Science is to deliver the remarkable discoveries and scientific tools that transform our understanding of energy and master and advance the national, economic, and energy security of the United States.

Office of Science

Climate Change Research Division (CCRD)

The Climate Change Research includes process research and modeling efforts to:

(1) improve understanding of factors affecting the Earth's radiant-energy balance;

(2) predict accurately any global and regional climate change induced by increasing atmospheric concentrations of aerosols and greenhouse gases;

(3) quantify sources and sinks of energy-related greenhouse gases, especially carbon dioxide; and

(4) improve the scientific basis for assessing both the potential consequences of climatic changes, including the potential ecological, social, and economic implications of human-induced climatic changes caused by increases in greenhouse gases in the atmosphere and the benefits and costs of alternative response options.

Global Change Education Program (GCEP)

- The U.S. Department of Energy's Office of Biological and Environmental Research has established the Global Change Education Program (GCEP) to promote undergraduate and graduate training in support of the Department's global change research activities. Global change research encompasses a wide variety of study areas, including atmospheric sciences, ecology, global carbon cycles, climatology, and terrestrial processes. There are three components to the GCEP:
  - **Summer Undergraduate Research Experience (SURE).** SURE involves students at the end of their sophomore or junior years and includes an orientation course and mentored research experience at national laboratories.
  - **Graduate Research Environmental Fellowships (GREF).** GREF supports graduate students in global change research through collaborations between universities and national laboratories.
